

YOUR PLAN. YOUR ROUND. YOUR CORNER.

Dee builds Muay Thai training around your goals, time and equipment, then guides every round with spoken cues. Sync a plan to Apple Watch and train without your phone. Available for iPhone, iPad, Apple Watch and Android.

Sync once. Train without your phone.

Apple Watch workouts already run independently. First, open Dee on your iPhone and sync the plan to the Watch. Once the plan is available on the Watch, you can leave the phone behind and start your session from the Watch's workout library.

The initial transfer needs iPhone. After sync, start, pause, resume and end the workout on Watch. Voice, haptics and a recap keep the session on your wrist.

Current releases

iOS 1.0.11 · 14 September 2026

Android 1.0.4

iOS / iPadOS 26 or later; watchOS 26 or later. Android 9 or later.

What's new on iOS

Dee 1.0.11 shortens onboarding and gives eligible new users one full workout before subscribing. Existing access is preserved.

IOS ACCESS

On iOS, eligible new users can complete one full workout free. Saving a workout, including an early finish, uses that allowance. Further workouts require a monthly or annual Dee Pro subscription unless you already have access. Trying the free workout does not start a subscription. Prices, offers and eligibility are shown in your local store and in the app.

Planning & customization

Build a plan around goals, experience, days per week, available equipment and session duration. A curated drill library covers shadowboxing, bag work, technique and conditioning. Adjust a session's equipment, duration or intensity as your day changes.

The workout experience

Timed work and rest rounds combine readable drill instructions with spoken cues, bells and haptics. Choose Warm, Energetic or Focused coaching. Saved workouts and bundled coaching audio can play offline.

Progress & consistency

See training history, weekly activity and the next session in your plan. Fight Camp brings streaks, ranks and milestones together; reminders help you make time, and shareable summaries mark completed workouts.

MADE FOR YOUR WAY TO TRAIN.

At home across Apple devices

Dee includes layouts for iPad, optional iCloud sync, widgets and Live Activities with Dynamic Island on supported iPhones. An App Clip offers a short introduction to a guided workout.

More ways to follow a round

Dee includes VoiceOver labels and spoken status information, text that follows Larger Text, and adaptations for Reduce Motion and Reduce Transparency. Work and rest are identified in words as well as color, with optional audio and haptic cues.

Seven languages, in and out of the round

English, Spanish, French, Brazilian Portuguese, German, Dutch and Hebrew cover the interface, drill content and coaching. Hebrew includes right-to-left layout. Warm, Energetic and Focused voices are available in all seven languages.

Apple Health

The initial sync needs iPhone. Standalone Watch workouts require permission to save workouts in Apple Health. Heart-rate and energy metrics depend on additional read permissions and available sensors.

AI & offline boundaries

iOS plans can use OpenAI through AIProxy, with a local rules-based fallback. Full plans do not use the on-device Apple model in this release; active PCC use is not claimed. Saved workouts play offline.

Dee on Android

Android uses an on-device rules-based planner. Goals, equipment, guided rounds, spoken coaching, progress and seven languages are available. Free download with optional Google Play subscriptions; see the app for local prices and included access.

Apple Watch, HealthKit, iCloud, Live Activities, Dynamic Island and the App Clip are Apple-platform features.

No separate Dee account

No separate Dee account. Store purchases use your platform account. iCloud sync is optional. Standalone Watch workouts require Health workout-recording permission. See dee.training/privacy for data controls and provider details.

FOR REVIEWERS

Install; set goals and equipment; build a plan; adjust a session; follow a round; finish and inspect progress. For Watch, confirm the plan has synced before leaving the phone behind. Try your preferred accessibility and language settings.

For additional review access, interviews or a specific capture, email info@dee.training. We will arrange the appropriate access directly. The public store releases are the recommended starting point.

Noam Efergan created Dee because he wanted to walk into the gym knowing what to work on.
